## Sharing the **SOLAR** light

### The Future

In conjunction with our partner Durst Industries (Australia) Pty Ltd, we hope to be able to create the Rotary Solar Cases as a “flatpack” - complete kit. These will be provided to schools to build standalone 12 volt DC Cases - potentially both in Australia and PNG.

In addition, it is expected that each kit will include a full curriculum based study program - for not only building and testing each unit but, also, including the social factors impacting on why these Cases are necessary in PNG and other developing nations.

The completed units may be disassembled and reused or distributed to those in need.

For Cases built in Australian schools, it is anticipated that each school group involved will build a relationship with the end users of the Cases gaining an understanding of how their efforts and contributions are adding value to other peoples lives.

**We need a science teacher  
with experience in solar to  
help us create the curriculum.**
